Antibodies

**Anti-Human CD20 Antibody, Clone 2H7, PE**

**Product Description**

Antibody 2H7 reacts with CD20, an ~35 kDa non-glycosylated type 1 transmembrane protein in the MS4A protein family. The CD20 polypeptide transverses the cell membrane four times, with only a minor portion of the protein displayed on the cell surface. The epitope recognized by antibody 2H7 has been mapped to the amino acid sequence YNCEPANPSEKNSPST, located in the large extracellular loop of CD20. CD20 is expressed on pre-B cells, resting and activated B cells, some follicular dendritic cells, and a subset of T cells. Expression by B cells is lost upon their differentiation into plasma cells. By associating with several proteins, including the B cell receptor (CD79), MHC class I and II, CD53, CD81 and CD82, CD20 is involved in initiating intracellular signaling pathways that modulate the activation, proliferation and differentiation of B cells. It is thought that CD20 forms multi-subunit ion channels which regulate calcium ion flux across the plasma membrane. Activation of CD20 is accompanied by pronounced phosphorylation of the cytoplasmic domain of the ~33 kDa apo-protein, with the appearance of 35 - 37 kDa isoforms which associate with Src family kinases such as Fyn, Lck and Lyn.

**Target Antigen Name:** CD20  
**Alternative Names:** B1, Bp35  
**Gene ID:** 931  
**Species Reactivity:** Human, Rhesus, Cynomolgus, Baboon, Chimpanzee, Capuchin Monkey, Pigtailed Macaque, Squirrel Monkey  
**Host Species:** Mouse  
**Clonality:** Monoclonal  
**Clone:** 2H7  
**IgG2b, kappa**  
**Immunogen:** Human tonsillar B cells  
**Conjugate:** PE

**Applications**

**Verified:** CellSep, FC  
**Reported:** FC  
**Special Applications:** This antibody clone has been verified for purity assessments of cells isolated with EasySep™ kits, including EasySep™ Human CD19 Positive Selection Kit (Catalog #18054) and EasySep™ HLA Whole Blood Lymphoid Positive Selection Kit (Catalog #18684HLA).

**Properties**

**Formulation:** Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) bovine serum albumin  
**Purification:** The antibody was purified by affinity chromatography and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.  
**Stability and Storage:** Product stable at 2 - 8°C when stored undiluted. Do not freeze. Protect product from prolonged exposure to light. For product expiry date, please request a lot-specific Certificate of Analysis from techsupport@stemcell.com.  
**Directions for Use:** For flow cytometry the suggested use of this antibody is 5 μL per 1 x 10e6 cells in 100 μL volume or per 100 μL of whole blood. It is recommended that the antibody be titrated for optimal performance for each application.
Data

(A) Flow cytometry analysis of human peripheral blood mononuclear cells (PBMCs) labeled with Anti-Human CD20 Antibody, Clone 2H7, PE and anti-human CD45 APC.

(B) Flow cytometry analysis of human PBMCs processed with the EasySep™ Human CD19 Positive Selection Kit and labeled with Anti-Human CD20 Antibody, Clone 2H7, PE. Histograms show labeling of the PBMCs (Start) and isolated cells (Isolated). Labeling of start cells with a mouse IgG2b, kappa PE isotype control antibody is shown in the bottom panel (open histogram).
