

## Report

The 26th Annual Meeting of the Japanese Society for Histocompatibility and Immunogenetics (JSHI 2017)  
(Hiroshima, October 27th-29th, 2017)

Veritas has long history in HLA field. Over 30 years ago, we started to bring TERASAKI typing tray from UCLA Laboratory. Following to typing tray, we introduced molecular HLA typing technologies like SSP, SSO, RSSO, SBT and NGS. Also, anti-HLA antibody detection method imported from One Lambda.

In JSHI 2017, we had three activities.

### 1. Booth exhibition

Veritas exhibited some products such as FlowDSA-XM(crossmatch), AllType NGS(typing), LABScreen Single Antigen(antibody) and Easy Sep(Cell Separation Products from STEMCELL Technologies Inc.). Some customers came to booth, and Veritas explained about our products. It was good opportunity to communicate with our users.

### 2. Technical consultation

Veritas advised about daily questions of HLA test such as machine operation method, analysis method. Several users came to get advisement and they resolved questions.

### 3. Charity activity

Veritas planned bowling and marathon as charity activity. The number of participants are bowling is 25 and marathon is 17.

The purpose is charity and to make human network. There are few sites doing HLA test, so they don't have a person to ask about daily questions. Therefore we planned this activity to provide opportunities to make human network between the facilities.

Booth exhibition

Charity Bowling

Charity Marathon
