

Statement on HepB+ antibody donors

06 April 2018

BioIVT accepts human tissues that are tested positive (+) for HepB surface antibody. BioIVT only accepts tissues that are negative (-) for both HepB surface antigen and HepB core antibody.

A donor that has demonstrated a positive (+) test for HepB surface antibody, and a negative (-) test for the HepB surface antigen and a negative (-) for the HepB core antibody does not carry the live HepB virus.
