

QUALITY AND COMPLIANCE STATEMENT

Human Cells Products

To the best of STEMCELL Technologies' knowledge, all Human Cells products, including induced pluripotent stem cell products, ("Products") supplied by STEMCELL Technologies are lawfully obtained and collected in compliance with applicable ethical requirements of the source country. Further inquiries may be directed to our Product and Scientific Support team (techsupport@stemcell.com).

1. STEMCELL supplies Products that are collected in accordance with the requirements of the source country from donors voluntarily participating in a donor program that is approved by an Institutional Review Board (IRB), Research Ethics Committee (REC), or equivalent agency.
2. A signed and witnessed consent form is obtained from donors prior to starting the collection protocol.
3. All donors have either donated their cells free of charge or are reasonably reimbursed for their time and effort in support of research and education.
4. All donors are aware that the cells may be used for research applications and waive any rights generated from the research applications.
5. Each donor is screened for general health and tested for HIV-1, HIV-2, hepatitis B, and hepatitis C, with the exception of frozen cancer cell products, which are not routinely screened. As testing cannot completely guarantee that the donor was virus-free, all Products should be treated as potentially infectious and handled using Biosafety Level 2 (BSL-2) precautions or higher and in using Products you release STEMCELL of any liabilities from contaminations of infectious pathogens in these products.
6. Donated samples are coded (pseudonymized) and controls on the personal identifiers of donors are in place to protect donors' personal information. Customers cannot access the personal identifiers.
7. Products are for research use only and not intended for human or animal diagnostic, therapeutic, or clinical applications. Products are not for human or veterinary use *in vivo*.
